Practica - a Musical Toolbox

Practica is an app that generates unique melodies to help you practice an instrument, train your ear, or experiment with songwriting ideas. The simple interface lets you quickly select a scale, create melodies, and control playback to suit your needs. Practica is designed with accessibility in mind, including features to help visually impaired users get the most out of the app.

App Features

Practice

Practica generates unique melodies based on the settings you choose, creating an almost unlimited number of practice exercises and challenges. Whether you're playing an instrument, singing, training your ear, or just looking for inspiration, Practica can help!

Control

Looping controls (including the ability to take turns with the app) and two separate tempo settings allow you to focus on what you're hearing, challenge yourself to perform it, or just try out some new ideas over a custom backing track.

Melody Guide

Tap to turn on the Guide and see the music as it's played. With the option to automatically use an alternative tempo, and turn itself off each time you create a new melody, you can easily adjust the Guide's behavior to suit whatever you're doing.

Accessibility

Music should be for everyone, and our goal is to make Practica as accessible as we can. The app has been designed with accessibility standards in mind, including the Guide's ability to announce the notes being played through screen readers like TalkBack.
